

Standardized SCWS Technologies!

We are now less than two months before the launch of the Development Phase for our [SIMAging 2009 Contest!](#)

And here comes a preview of the Official Developer Suite SIMAging Release. Each year for the SIMAging Contest, we propose a brand new Developer Suite with innovative features to stimulate even more the creativity of our Developer Community. Last year, we migrated to Eclipse and provided the very first features related to the Gemalto Proprietary Smart Card Web Server (SCWS) and Near Field Communication (NFC). So, what's new in this [Developer Suite 3.2 NFC Ready?](#)

- New ETSI Standardized Smart Card Web Server (SCWS)
- Near Field Communication (NFC) Solutions development and simulation
- New Project Creation Wizards. It is now easy to generate an Applet based on a set of technologies such as STK, SCWS, NFC (Card Reader Mode, Card Emulation Mode, Tag Reader)

And what's more to come with the Final Release of the SIMAging Developer Suite 3.2, expected for mid of October?

- The Official Release will be working with the new Gemalto Multimedia & NFC Cards. (The Cards used for the SIMAging 2009 Contest)
- We will also provide an NFC Card Reader Simulator as well as an NFC Tag Simulator.

The Developer Suite NFC Ready is available NOW! from the [Download Section of the Gemalto Developer Network](#). Licenses may be purchased online on the [Gemalto Web Store](#).

As usual, we release at the same time the corresponding Simulation Suite allowing you to test/run Solutions created using the Developer Suite.

See you in the Forum where I created a [thread related to this new release!](#)

And good luck for the SIMAging Contest!
